

HTML Tutorial - 5

HTML Links

- <a> tag defines a hyperlink.

Syntax:

```
<a href="url">link text</a>
```

- href attribute indicates the link's destination.

Example:

```
<a href="https://shikshaskills.org.in/">Visit shiksha skills institute</a>
```

Target Attribute

- Target attribute specifies where to open the linked document.

Target attribute have following values:-

1. `_blank` - Opens the document in a new window or tab
2. `_self` - Opens the document in the same window/tab as it was clicked(default)
3. `_top` - Opens the document in the full body of the window
4. `_parent` - Opens the document in the parent frame

Example:

```
<a href="https://shikshaskills.org.in/" target="_blank">Visit shiksha skills institute</a>
```

Absolute & Relative URL

Absolute URL:- A full web address in href attribute.

```
<a href="https://shikshaskills.org.in/">Visit shiksha skills institute</a>
```

Relative URL:- A link to a page within the same website (without "https://www")

```
<a href="http://127.0.0.1:5500/relative_url.html">Visit shiksha skills institute</a>
```

Image as a link

- put the tag inside the <a> tag:

Example:

```
<a href="https://shikshaskills.org.in/"></a>
```

Email Address as a link

To create a link that opens the user's email program for sending a new email, use the mailto: inside the href attribute as follows:

Example:

```
<a href="mailto:info@shikshaskills.org.in">Send email</a>
```

- This will open the default email application with the specified email address.

HTML Images

The tag has two required attributes:

src - Specifies the path to the image

alt - Specifies an alternate text for the image

Syntax:

```

```

Example:

```

```

Image size width & Height

```

```

Image in another folder

```

```
