# HTML Tutorial - 6

HTML Attributes

List Out a HTML Attribute:

1. href
2. src
3. width & height
4. alt
5. style
6. lang
7. title

⭐ **lang Attribute**

Always include the lang attribute within the <html> tag to specify the language of the webpage. This helps search engines and browsers better understand the page's content.

```
<!DOCTYPE html>
<html lang="en">
<body>
...
</body>
</html>
```

```
<!DOCTYPE html>
<html lang="en-US">
<body>
...
</body>
</html>
```

You can also add country codes to the language code in the lang attribute. The first two characters specify the language of the HTML page, while the last two characters define the country.

⭐ **title Attribute**

The value of the title attribute will be displayed as a tooltip when you mouse over the element:

Example:

```
<p title="I'm a girl">My name is Dhara.</p>
```

⭐ HTML Comments

Syntex:

```
<!-- Write your comments here -->
```

Example:

```
<p>Providing Best Education For Brighter future</p>
<!--
<p>Look at this cool image:</p>
    <img src="active-states.jpg" alt="hero section">
-->
<p>Providing Best Education For Brighter future</p>
```

⭐ HTML Favicons

- You can put image/logo/icon next to the title of your page (in the tab)
- Must go in <head> section

Example:

```
<link rel="icon" type="image/x-icon" href="favicon.png">
```

Every webpage should include a title that describes the content or purpose of the page.

The <title> element adds a title to your page:

⭐ HTML Page Title

Example:

```
<!DOCTYPE html>
<html>
<head>
  <title>HTML Tutorial</title>
</head>
<body>
    Body Content here....
</body>
</html>
```
